

WILLOW

Willow

This willow grows in
Liptovský Mikuláš near
Evangelic Primary School.

Its ^{trunk} (phyla) is large and
15 m high. It has got
long green leaves. Its branches
hang down. Because of it, it is
called a sad willow. From
its branches we can make
a lot of nice things.

For example crows or
larks. Willow grows
very fast, but it
needs a lot of water
and sun. There are
about 400 kinds of
willows. Our school's
willow is very
old. It offers a shadow for students

during hot summer
days. There is a hanging
swing. Sometimes we can
swing on it. We like to
play there. It is a nice
tree.
